

AquaLOOP

Your Loop Management System for Purified Water

AquaLOOP is a compact system for the distribution of Purified Water and continuous sanitization of PW Loops.

AquaLOOP is delivered ready to connect and pre-qualified and combines the following system components:

- Frequency controlled feed pump
- Electrolytic ozone generation
- UV radiation unit
- Ozone measurement
- Conductivity measurement
- Flow rate measurement
- Piping in stainless steel 316 L, orbitally welded, surface roughness $R_a < 0,8 \mu\text{m}$
- Heat exchanger for thermal sanitization purposes (option)
- Heat exchanger for cooling purposes (option)
- Control cabinet

Customers Benefits:

- Plug & Play principle
- Variable capacity range, adaptable to any system
- Forms, together with AquaPUR or AquaRO a system for generation, distribution and monitoring of Purified Water
- FDA conform documentation
